

**SOUTH CAROLINA
DEPARTMENT OF REVENUE**

**ELECTRONIC FUNDS TRANSFER/
ELECTRONIC DATA INTERCHANGE**

**SALES, USE, LOCAL OPTION,
SPECIAL LOCAL AND
ACCOMMODATION TAXES**

**IMPLEMENTATION GUIDE
FOR
SOFTWARE DEVELOPMENT**

Revised November 2004

**(Required for all tax returns transmitted after
February 1, 2005)**

This guide reflects changes to the South Carolina EFT/EDI program for sales, use, local option, special local, and accommodations taxes. Any transmission received from a taxpayer using your software after February 1, 2004 must be in compliance with this guide. If they are not in compliance,

their transmission will be rejected at the VAN.

Changes include:

- * 'SAL', 'LOC', 'SCH', 'TRA', 'CAP', 'POT', 'CAT', and 'ACC' loops
 - Addition of the deduction codes '4117' = Gasoline
 - Addition of the deduction codes '4128' = Labor not taxable

NOTE: Labor and Gasoline have been removed out the '4208'- Sales not subject to tax deduction and been given independent deduction codes of '4117' and '4128'.

* Currently, 'POT' is not an applicable for taxation and should not be included in any transmission sent to the SCDOR.

Reminder:

As of July 1, 2001, the 4% food tax provision has been placed on hold but may be subject to implementation in the future. Therefore, the TIA's for the 4% food tax is included in the mapping.

The Property Offset Tax (POT) loop is also included in this guide, but is not currently applicable for taxation.

You will not need to include the food nor the POT loops in your testing process.

Please note:

When there is a version change, SC Dept of Revenue requires you test your software changes with us prior to release to your taxpayers. Please help us to help our taxpayers (and your clients) by keeping us informed of your actual release date.

OVERVIEW

The original Electronic Data Interchange (EDI) program started in 1995 as a pilot. The program went into full production in March 2000.

Our program uses the standard ANSI X12 813 tax return transaction set and 997 functional acknowledgment transaction set.

FLOW OF DATA

All parties intending to transmit to the Department must verify they, their VAN or their service bureau is able to interconnect with the Department's VAN.

Taxpayers will transmit the 813 transaction set to our VAN. If they are using the ACH debit payment, they will include in the 813 the information necessary to initiate the transaction. The VAN will build an ACH record and transmit the record to the State's bank who will originate the transaction. The Department's VAN will translate the 813 into a predefined record and transmit to the State.

If the taxpayer is using the credit method, they will directly instruct their bank to initiate their credit. The VAN will warehouse the 813 transaction set and match to the ACH credit record when it is received from the State's bank. They will then translate the 813 into the predefined record and transmit to the State.

THE SOFTWARE DEVELOPER

Your place in the process is one of the most crucial. We at the Department depend on you to develop software that will meet our needs in terms of edits and proper layout. The users of the software count on you to develop a user-friendly package that will fit their business needs and ensure accurate translation of their data.

To help you in every way possible, the remainder of this handbook gives you contacts if you have questions or need additional information, the current map, testing procedures that we require you to use, record layouts/edits to define the framework of the software, and a sample mapping of a sales tax return.

TESTING PROCEDURES

A test package for software developers is enclosed with this guide or is available by contacting the South Carolina EFT/EDI Help Desk. **All developers must register with the Department and test prior to the use of their software for live transmission by taxpayers of South Carolina.**

Complete the Registration Application in this guide prior to setting up your communication link with our VAN. Mail or fax your application to the Department. After receiving your application, the SCDOR will contact the VAN to have your mailboxes set up.

Contact us when you are ready to test with the Department. The test package includes numerous examples common to taxpayers of South Carolina. If your software will not offer all aspects of sales tax filing (for example you may not wish to include accommodations), make that known to us in the initial call, and you need not test that example.

Whenever you send a file to the VAN for processing, be sure that you receive your 997 acknowledgment to be certain your test has passed the initial edits. If you have a problem with any aspect of your transmission, call the VAN.

The files are pulled at 12:00 Noon (EST) each business day, translated and sent to the Department for review. Your 997 will be available within 48 hours after the date of transmission, providing the cutoff time is met.

After receiving your test, we will notify you of the results, continued testing i8s often required. After you have successfully completed the testing process, you will be notified by letter that you can make your software available to taxpayers.

Whenever you make a significant change to your software package, you should run another test with us to ensure accuracy and reliability for your users.

TECHNICAL SPECIFICATIONS

INTRODUCTION

The following pages specify our translation requirements for the 813 transaction set, Standards Version 004010. **Note: Some segments and data elements that may be optional in the ANSI ASC X12 standard are listed here as mandatory.** This means that we require this information and it must be present in the transaction set to be a valid tax return.

Even if you are not an expert on EDI standards, you should be able to make your software format an acceptable 813 by following the specifications on the following pages. However, we strongly recommend that you have a general familiarity with EDI and X12.

To learn more about ANSI ASC X12 standards, please contact:

Data Interchange Standards Association
333 John Carlyle St Ste 600
Alexandria, VA 22314-5743
(703) 548-7005

TRANSACTION SET OVERVIEW

The following diagram shows the 813 transaction set, and the segments required for our program.

TRAILER PORTION OF TRANSACTION SET:

SE Transaction Set Trailer
GE Functional Group Trailer
IEA Interchange Control Trailer

NOTES:

1. The BTI09/10 are critical data elements that identify the taxpayer filing the return and are used in matching the credit payment to the electronic return. If this number is not present, full electronic processing cannot occur.
2. The BPR segment in the transaction set header is used to carry Automated Clearing House (ACH) data. This information is used to create a bank debit.
3. There are two "loops" within the detail portion of the transaction set.
 - a. The outer loop, called the "TFS loop" because it begins with a TFS segment, carries the tax return information for a specific retail license. If there is only one location, with one retail license, then the 813 will have only one TFS loop. If you are filing a master return for several retail licenses, then your 813 will have one TFS loop for **each** retail license.
 - b. The inner loop, called the "FGS loop" because it begins with an FGS segment, carries specific tax information for either sales and use, local option, school districts, transportation, capital projects tax and accommodations taxes.

You must **always** have one FGS loop labeled 'SAL' for sales and use taxes when you are transmitting a return.

If you are liable for local option taxes, you must have one FGS loop labeled 'LOC' for **each** county/municipality for which you owe local option taxes.

If you are liable for special local taxes, you must have a separate FGS loop labeled SCH, TRA, CAP, CAT, or POT for each county/municipality for which you owe special local taxes.

If you are liable for accommodations taxes, you must have one FGS loop labeled 'ACC' for **each** county/municipality for which you owe accommodations taxes.

4. All segments are required unless designated otherwise.

TRANSACTION SET DETAIL

The charts on the following pages show each required data element for each segment. For each data element, we show the following:

- ◆ **identification** (segment name + 01, 02 ...)

- ◆ **reference number** in the X12 Standards

- ◆ **name**

- ◆ **attributes:**

type

AN	alphanumeric
ID	code value
DT	date in CCYYMMDD format (except ISA09)
TM	time in HHMM format
R	numeric including minus sign and/or decimal point
NO	whole number

requirement

M	mandatory
O	optional
X	conditional

- ◆ **minimum length**

- ◆ **maximum length**

- ◆ **value** required and/or comments

NOTES:

1. **All dollar amounts must be in whole dollars.** No decimal places are allowed. Please round all monetary amounts to the nearest whole dollars.
2. The tilde (~) is used to separate data elements within a segment. Whenever there is an unused data element within a segment, you must use an additional tilde to indicate the unused data element.

HEADER PORTION OF TRANSACTION SET

INTERCHANGE CONTROL HEADER SEGMENT - required (map last modified Dec 2003)

ID	REF	ELEMENT NAME	ATTRIBUTES				VALUE/DESCRIPTION
ISA01	I01	Authorization Information Qualifier	ID	M	2	2	"00" = No authorization information present

GE02	28	Group Control Number	N0	M	1	9	Must equal GS06

INTERCHANGE SEGMENT - required

ID	REF	ELEMENT NAME	ATTRIBUTES				VALUE/DESCRIPTION
IEA01	I16	Number of Included Functional Groups	N0	M	1	5	Number of functional groups included in this interchange
IEA02	I12	Interchange Control Number	N0	M	9	9	Must Equal ISA13

ADDITIONAL SOFTWARE EDITS

The tables on the preceding pages show most of the edits that will be performed on your 813. For example, all data elements of type R must be numeric, all data elements of type DT must be valid dates in CCYYMMDD format (except ISA09), and all codes must be from the lists given. However, listed below are additional edits that must be performed. We strongly recommend you incorporate these edits into your software to minimize the possibility the 813 will be rejected.

1. If the EDI/EFT transaction being transmitted is a prenotification (prenote) for a debit account, then:
 - a. The test/production flag given in the ISA15 data element of the ISA interchange control header segment must be set to "T". **All return data sent with a prenote transaction will be considered test data.**
 - b. BPR01 in the BPR segment must equal "P".
 - c. The total payment amount given in the BPR02 of the BPR segment must equal zero. **Any non-zero payment amount will be treated as zero.**
 - d. If a production file and the BPR segment holds a single debit authorization, the payment amount must be greater than zero. (BPR01 = S)
2. The nine-digit bank RT (route/transit) number given in BPR07 and BPR13 of the BPR segment is eight digits plus a check digit. The check digit is calculated as follows:

Multiply each digit in the RT number separately by its weighing factor. The weighing factors for each digit are:

Position: 1 2 3 4 5 6 7 8
Weights: 3 7 1 3 7 1 3 7

Add the results of the eight separate multiplications.

Subtract the sum of the addition from the next higher multiple of ten. The result of the subtraction is the check digit.

Example: RT Number: 0 4 0 3 8 4 8 3
Weights: 3 7 1 3 7 1 3 7
Results: 0 28 0 9 56 4 24 21

Sum = 0 + 28 + 0 + 9 + 56 + 4 + 24 + 21 = 142

Check digit = 150 - 142 = 8.

3. The contact function code in data element PER01 of the PER segment is taken from table 366 of the ANSI ASC X12 standards. Some suggested values for this data element are:

AC Administrative Contracting Officer
 AD Accounting Department
 AF Authorized Financial Contact
 AM Administrator
 AU Report Authorizer
 CG Chief Executive Officer
 CI Chief Financial Officer
 CN General Contact
 EA EDI Coordinator
 IC Information Contact
 MG Manager
 OW Owner
 PA President
 PI Preparer
 TM Transmitter

4. The nine-digit retail license number (RLN) given in TFS04 of the TFS segment is actually eight digits plus a check digit. The check digit is calculated as follows:

Multiply each digit in the RLN number separately by its weighing factor. The weighing factors for each digit are:

Position: 1 2 3 4 5 6 7 8
 Weights: 2 1 2 1 2 1 2 1.

Add all of the digits from the results of the eight separate multiplications.

Subtract the sum of the addition from the next higher multiple of ten. If the calculation totals a multiple of ten, the check digit is zero. The result of the subtraction is the check digit.

Example: RLN Number: 0 4 0 3 8 4 8 3
 Weights: 2 1 2 1 2 1 2 1
 Results: 0 4 0 3 16 4 16 3

Sum = 0 + 4 + 0 + 3 + 1 + 6 + 4 + 1 + 6 + 3 = 28

Check digit = 30 - 28 = 2.

NOTE: THIS IS A DIFFERENT CHECK DIGIT CALCULATION FROM THE RT NUMBER. FIRST, THE WEIGHTS ARE DIFFERENT. SECONDLY, ALL OF THE DIGITS OF THE MULTIPLICATION ARE ADDED, RATHER THAN ALL OF THE RESULTS.

5. In each FGS loop, whether it's type SAL, type LOC, type SCH, type TRA, type CAP type POT or type ACC, the sum of the deductions **cannot** be greater than the amount of gross

proceeds.

6. **A maximum in-state taxpayer* discount for EDI taxpayers of \$3,100** can be taken from July 1 through June 30 of each year. A maximum out-of-state taxpayer* discount of \$10,000 can be taken from July 1 through June 30 of each year. Until you reach your maximum discount, calculate your discount (TIA segments with TIA01 = "4098") as follows:

First calculate sales tax due by multiplying net taxable sales (amount given in TIA segment with TIA01 = "4012") by 5%. If sales tax due is equal to or greater than \$100, the amount of taxpayer's discount is equal to 2% of sales tax due.

If sales tax due is less than \$100, the amount of taxpayer's discount is equal to 3% of sales tax due.

Apply the **same discount rate** to local option, school districts, transportation, capital projects, property offset, and accommodations taxes if applicable.

* The total amount allowed applies to the entire taxpayer account, not to each retail license.

7. The table of valid county/municipality and jurisdictional codes is in the Appendix.
 - a. South Carolina **four-digit** county/municipality codes are used in data element FGS03 in the FGS segments where FGS01 equals LOC, TRA, CAP, POT, or ACC.
 - b. South Carolina jurisdictional **six codes** are used in data element FGS03 in the FGS segments where FGS01 equals SCH.
8. Negative figures are **never** allowed.

9. **All** dollar fields must be numeric and in whole dollars.

10. If software vendor is supplying communications capability and SCDOR is providing the customer mailbox, then ISA05 must = ZZ and ISA06 must = the taxpayer's mailbox address minus the lead in C.

11. BTI10 must have 7 digits.

12. If BPR03 = D, then BPR01 can = S or P.
If BPR03 = C, then BPR01 must = Q.

13. DEBIT TRANSACTIONS

- a. All required BPR fields must be completed for a debit authorization to be generated to the bank. The required fields are BPR01, BPR02, BPR03, BPR04, BPR10, BPR11, BPR12, BPR13, BPR14, and BPR15.

- b. SCDOR does provide a warehousing capability for debit

taxpayers. To utilize warehousing, BPR16 must be a date greater than the projected date of transmission. If not, VAN will default to next banking day for settlement.

14. It is critical that software programs be capable of translating 997 codes into user-friendly language for correction purposes. If the codes are not translated within the software, taxpayers will be referred to software developers for translation of any 997 error codes.

15. Freeze all data after each transmission to ensure a proper audit trail. Do not allow transmitted data to be altered.

FUNCTIONAL ACKNOWLEDGEMENT OVERVIEW

For each functional group of 813 Tax Return Data transaction sets sent to the Department's Van, the VAN will send one transaction set, the 997 functional Acknowledgement, back to the sender. The 997 defines whether whether the 813 transaction sets in the original functional group were accepted by the VAN or they were rejected due to errors. It is critical that software programs be capable of translating 997 codes into user friendly language for correction purposes. If the codes are not translated within the software, taxpayers will be referred to the software developer for translation of any 997 error codes.

The following diagram shows the 997 transaction set.

ISA Interchange Control Header
GS Functional Group Header
ST Transaction Set Header
AK1 Functional Group Response Header

AK2 Transaction Set Response Header

AK3 Data Segment Note

AK4 Data Element Note

AK5 Transaction Set Response Trailer

AK9 Functional Group Response Trailer

SE Transaction Set Trailer

GE Functional Group Trailer

IEA Interchange Control Trailer

NOTES:

1. Segment AK9 is used to indicate whether the functional group of 813 transaction sets that you sent to the VAN was accepted. If AK901 is equal to "A", then the transmission was accepted. If AK901 is equal to "R", then the transmission was rejected.
2. Segments AK2 through AK5 are used only if errors have been detected. These segments are used to indicate which 813 transaction set(s) is in error, and to indicate the data segments and/or data elements in error. If there are no errors, the AK2, AK3, AK4, and AK5 segments will not be used.
3. If the transaction set is rejected, BSWA (SCDOR's VAN) will send an e-mail directly to the vendor. It is the vendor responsibility to contact the taxpayer to resolve the error. True X12 taxpayers will be sent an e-mail directly back to them. The error must be corrected and the entire transmission re-sent to the VAN. **The electronic tax return has NOT been filed until the transmission is accepted by the VAN.**

4. The 997 only detects syntax errors (errors in the "grammar" of the 813 that would prevent the VAN from reading it, or missing essential information such as debit account number). It does not detect math errors or other filing errors. The taxpayer will be notified by the South Carolina Department of Revenue of any math errors or other filing errors detected in processing the electronic return in the same way as for a traditional paper return.
5. Do not acknowledge the 997 Functional Acknowledgment!

APPENDIX A

SALES AND LOCAL OPTION COUNTY/MUNICIPALITY CODES OF SOUTH CAROLINA

NOTE: The taxpayer must be able to report Local Option Sales Tax under the county codes or the municipality codes. Local Option Sales Tax should be reported under a municipality 4-digit code if the goods being delivered are being delivered within a municipality. If goods are being delivered to a location not located within a municipality, those sales would be reported under the county 4-digit code.

<u>CODE</u>	<u>COUNTY</u>		
1001	Abbeville County	1006	Barnwell County
